## Education

### High School Degree

09/2016 - 06/2021

I.T.E.T. Leonardo Da Vinci Milazzo(ME)

IT Expert - IT and Telecommunications

Graduated with a grade of 100/100ths

During my 5 years schooling I acquired some basics of computer programming, thanks to the study of languages like Java and C and the use of relational database.

### Master in Full-Stack Development

03/2023 - 04/2024

start2impact

During my Full Stack Development's journey I undertook the study of everything about web development.

I started by taking care about front-end of website, and then extended my skills to the back-end development.

This 360° approach allowed me to gain a complete vision of the web development process.

## Projects

### CodeChronicle

It is a web application for the dissemination of technological's informations thanks to the API of Hacker News, a website that acts as a news aggregator and discussion forum for technology enthusiasts.

The project was created using JavaScript and some libraries like Axios and Lodash for API's management.

### New York Times Clone

The project consists in the creation of a clone of the famous newspaper's website New York Times. The site aims to recreate what is the homepage of the NYT, showing the articles received from the API provided by the site itself.

The project was created using React as framework, and a series of technologies like Redux, React Router and React Query which orbit around the React world.

### Plenty of Food API

The project consists of creating RESTful JSON APIs to manage groupspurchase order of the Plenty of Food company. The APIs will allow the execution of CRUD operations (Create, Read, Update, Delete) on different entities maintaining strict adherence to REST architectural standards.

The project was created using Node.js and Express.js for the back-end development and MongoDB such as database for saving information.

### FlickPicks

It is a web application based on MERN technology that allows user to explore a large collection of movies and save the ones that him like in custom lists. Includes front-end functionality to handle API RESTful calls for login/logout and user registration and to allow the user to save his favorite films in personal lists.

## Hard Skills

### Languages

HTML, CSS, Sass, JavaScript

### Libraries & Framework

React, Redux, React Query, React Router, Node.js, Express.js, MongoDB, Mongoose, Bootstrap, Tailwind, Jest, Framer Motion

### Tools

Git, GitHub, Vite, Netlify, Vercel

## Soft Skills

Thanks to the training gained during my studies, from the 5 year of high school to the year of study of the start2impact Full-Stack course, I acquired some soft skills skills will be useful for my working career.

These are:

- Work towards objectives;
- Organization skill;
- Observation skill;
- Creativity;
- Teamworking and communication;
- Professional conduct;
- Emotional intelligence;
- Punctuality;

## Languages

Italian Language : Native

English Language : Intermediate
